DO NOT ENTER

1.-24. (Cancelled)

25. (Currently Amended) A highly corrosion resistant high strength stainless seamless steel pipe for linepipe having a composition comprising: 0.001 to 0.015% C, 0.01 to 0.5% Si, 0.1 to 1.8% Mn, 0.03% or less P, 0.005% or less S, 15 to 18% Cr, 0.5% or more and less than 5.5% Ni, 0.5 to 3.5% Mo, 0.02 to 0.2% V, 0.001 to 0.015% N, and 0.006% or less O, by mass, to satisfy the formulae (1), (2), and (3), and optionally further comprising by mass:

0.002 to 0.05% Al.

3.5% or less Cu,

at least one element selected from the group consisting of 0.2% or less Nb, 0.3% or less Ti, 0.2% or less Zr, 0.01% or less B, and 3.0% or less W; and/or 0.01% or less Ca;

and balance of Fe and impurities:

$$Cr + 0.65Ni + 0.6Mo + 0.55Cu - 20C \ge 18.5$$
 (1)
 $Cr + Mo + 0.3Si - 43.5C - 0.4Mn - Ni - 0.3Cu - 9N \ge 11.5$ (2)
 $C + N \le 0.025$ (3)

where C, Ni, Mo, Cr, Si, Mn, Cu, and N signify the content of the respective elements, and a microstructure comprising residual austenite phase that is present, but in an amount that is about 40% or less, about 10 to about 60% ferrite phase, and about 25% or more martensite phase, by volume, with the martensite phase as a base phase.

- 26. (Cancelled)
- (Previously Presented) The high strength stainless seamless steel pipe according to claim25, wherein the content of Ni is about 1.5 to about 5.0% by mass.
- (Previously Presented) The high strength stainless seamless steel pipe according to claim25, wherein the content of Mo is about 1.0 to about 3.5% by mass.
